

2022–2024 Action Plan

Fundamental Pillars

Cleaner Energy Sources

Promote the decarbonization of the energy system, transportation, industry, and housing in the Americas, through cooperation for the sustainable production and use of all forms of renewable energy and other low-carbon sources to enhance the sustainable energy development of the region.

Universal Energy Access

Ensure universal access to clean, safe and affordable energy, prioritizing sustainable energy development in rural areas, vulnerable regions and historically marginalized communities.

Promote inclusion in the energy sector, fostering ethnic, social and gender diversity and equality in regards to employment, wage, training access and leadership opportunities.

Energy Efficiency

Encourage the development of public policies that promote responsible energy consumption and the adoption of more efficient and cleaner technologies in the residential, industrial, commercial and transport sectors.

Regional Integration

Promote technical and policy coordination for interconnection based mainly on renewable energies, harmonization of standards and exchange of knowledge among the countries of the Americas.

Energy Resilience

Promote the development of energy systems with greater capacity for adaptation and recovery from the impacts of climate change, with particular consideration of the specific vulnerabilities of island states and developing countries.

Innovation

Promote research and implementation of new technologies and processes, as well as nature-based solutions, that accelerate the energy transition and contribute to the adaptation and mitigation of the effects of climate change.
